TO BE UPHELD BY

Every Organiser who follows

read it, sign it, improve it, hand it forward

About this Playbook

This document is the operating manual of **GDG on Campus JIS University**. Where the *Technical Report* records *what* the chapter has done, this playbook sets out *how* the chapter should be run — how the core team is formed, how it must conduct itself, how an event is cleared and documented, and the standards every lead is expected to hold.

How to use it.

Read it in full before your first event. It is written so a new lead never has to guess the process or re-learn it the hard way. It is deliberately practical: exact email chains, exact documents to keep, exact standards to meet. Treat it as binding for the routine, and as a floor — not a ceiling — for everything else.

→ Keep it alive.

A playbook that is never updated becomes folklore. When you learn something the hard way, write it down here so the next lead does not. Amend it honestly, in your own voice, and sign the handover so the chain of responsibility is never broken.

Acknowledgement & Declaration

Signed at the handover of leadership, from the outgoing Organiser to the incoming one.

Declaration

I have read and understood the guidelines set out in this playbook — the standards of integrity, the Code of Conduct, the privacy and terms of the community, and the processes for running and documenting events. As the incoming Organiser of **GDG on Campus JIS University**, I accept responsibility for upholding them, for the conduct of the core team I form, and for the honest record of the work done during my tenure.

I accept the chapter as it is handed to me, and I undertake to hand it forward — a little larger, a little truer than I found it — to whoever carries it next.

Forming the Core Team

The core team is the engine of the chapter. Its size and composition decide the year more than any single event does. Form it deliberately.

⚠ The lesson from 2025–26.

The team was **19 people, including the lead**. At that size two problems appeared: the group became hard to coordinate — too many voices, slow decisions, diffused ownership — and participation was uneven, with a share of members carrying little of the actual load. **A working team of ten beats a nominal team of nineteen**. Recruit for commitment and a clear deliverable, not for headcount.

Principles

- **Every member has a defined role and a deliverable.** No seats without a mandate.
- **Keep it lean.** Prefer a smaller team where everyone is accountable over a large one where responsibility is diffuse.
- **Ownership, not titles.** A role is a set of responsibilities someone answers for, not a badge.
- **Review participation through the year.** Roles that go unworked should be reassigned, not carried.

Standing roles — fixed every season; fill these first.

Standing role	Mandate
Head Mentor	Owns technical direction and quality. Guides members, reviews what the chapter ships, and keeps the bar high across every domain the chapter runs.
Outreach & Content	Owns partnerships, speaker and community outreach, and everything the chapter publishes — announcements, social posts, captions and event copy. The chapter's public voice.
Design	Owns the visual identity — posters, banners, certificates, decks and social creatives — held consistent with the Google / GDG brand.

Flexible roles — sized to the year.

Beyond the standing roles, keep the remaining seats flexible and open them according to what the year actually needs — more mentors for a hackathon-heavy calendar, more outreach for a partnership push, and so on. Add roles when there is work to justify them, and only then.

🔗 Where this is heading.

The detailed definition of each role is being moved onto **GitHub**, where events will be created and managed as issues and boards — inspired by GitHub's own *Open Source Friday* model. The per-role responsibilities, and the GitHub workflow that backs them, are documented in a later section of this playbook (*in progress*).

Integrity, Terms, Privacy & Conduct

These four standards are binding on the lead and every member. They are written plainly so there is no ambiguity about what the chapter expects.

01 Integrity

We represent the chapter, the Department and Google honestly.

- **Report figures as recorded.** Attendance, footfall and outcomes are reported as they actually happened. We do not inflate numbers.
- **Handle resources transparently.** Any funds, sponsorship or swag are accounted for and used for the community, not for private benefit.
- **Give credit.** Speakers, partners, volunteers and prior leads are acknowledged for their work.
- **Represent affiliation truthfully.** We use the Google / GDG name and marks only as permitted under Google's community and brand guidelines, and never imply endorsement we do not have.

02 Terms of Service – Membership

These terms govern membership of the chapter.

- **Who may join.** Membership is open to students of JIS University, and to others only as expressly extended by the lead for a given activity.
- **Voluntary participation.** Membership and all participation are voluntary and carry no payment or guarantee of position.
- **Operating authority.** The chapter operates under the Department of Computer Science & Engineering, JIS University, and within Google's program terms for GDG on Campus.
- **Responsible conduct.** Members act in the chapter's name only with the lead's authorisation and must uphold the Code of Conduct at all times.
- **Removal.** The lead, in consultation with the Faculty Advisor, may remove a member for a serious or repeated breach of these terms or the Code of Conduct.
- **Work & credit.** Work produced for the chapter may be used by the chapter for its events, reports and promotion, with the contributor credited.

03 Privacy Policy

How the chapter handles the personal information of members and attendees.

- **What we collect.** Name, roll number, academic year, email, phone number, event attendance, and event photographs.
- **Why we collect it.** Registration, attendance records, issuing certificates, event reporting, and communication with members.
- **Where it is stored.** In the chapter's dedicated Google Drive folders, with access limited to the core team members who need it.
- **Sharing.** Shared with Google or an event partner only to the extent needed to run the event or issue certificates. Personal data is never sold or used for unrelated purposes.
- **Photographs.** Photos taken at events may appear in reports and on chapter channels; anyone may request that their image be withheld or removed.
- **Retention & removal.** Records are kept for the chapter's institutional memory. A member may request correction or removal of their personal data by writing to the lead.

04

Code of Conduct

Everyone in the community — members, volunteers, speakers and attendees — is expected to follow this, at every event, online and offline, and in all chapter channels. **Expected.**

- Be respectful, inclusive and welcoming, regardless of background or level of experience.
- Collaborate in good faith; give and take feedback professionally.
- Respect the venue, the Department, speakers and fellow members.

Not tolerated.

- Harassment, discrimination, or intimidation in any form.
- Sharing others' private information; plagiarism or passing off others' work.
- Disruptive, dishonest or unsafe behaviour at events or online.

Reporting & enforcement. Concerns should be reported to the lead or the Faculty Advisor and are handled confidentially. Breaches are met with a warning and, where warranted, removal from the team or community.

Running an Event – Approval Flow

This is the communication chain for clearing an event on campus. It applies to **on-site events**, whether they are GDG's own or run with a community partner.

📍 On-site event

1 Email the Faculty Advisor

Sent by the student. Seek approval to hold the event — share the plan, date, format and partner (if any).

↓ *on Faculty Advisor approval*

2 Email the Department Coordinator

cc: HOI (Registrar) · HOD

Sent by the student, forwarding the approved plan.

↓ *only if audio equipment is needed*

3 Request microphone / speaker access

Email **HOI** and **Dr. Devlina Pal**.

cc: Faculty Advisor.

📶 Online event.

For an online event, the approval chain is not needed — but the event must still be put on record. **Email the Faculty Advisor only**, with the plan and date, so the chapter keeps a documented trail of everything it runs.

Steps 1–2 are the student's responsibility. Keep every approval email — it is part of the event's record (see the next section).

Email Standards & Event Records

Email footer

Every official email sent on the chapter's behalf must carry a consistent footer, so the community is recognisable and reachable. The footer must include the **lead's name and role**, the **lead's phone number**, and the **GDG JIS University stamp / logo**.

Event records — Google Drive

For **every event, online or offline**, upload the following to the chapter's dedicated Google Drive folder (one folder per event, named consistently). These three documents are mandatory and are what make the Technical Report possible.

- | | |
|---------------------------|--|
| 1 MoU | The Memorandum of Understanding for the event / partnership. |
| 2 Attendance sheet | The recorded attendance for the event. |
| 3 Event report | A written report of the event <i>with images</i> . |

Keep the Drive tidy and current. The record you keep today is the institutional memory the next lead inherits — and the raw material of every future report.

Coming Next (In Progress)

The following sections are being written and will be appended in the next revision of this playbook.

- **Managing events on GitHub.** How the chapter will create and run events on GitHub — issues, boards and templates — modelled on GitHub's *Open Source Friday*, so event listing becomes simple and transparent.
- **Participation certificates via GitHub.** Using GitHub's email service to issue participation certificates to attendees.
- **Refreshing the `dscjisu` organisation repositories.** Bringing the organisation's repositories up to date and into a maintainable state.

✂ **Placeholder.** This section is a marker so the structure is settled; the detailed workflow will be dropped in here.

A Note to the Next Lead

You inherit a chapter, a community, and this playbook. Follow it where it is settled, improve it where it is not, and never let the standards slip below the floor it sets. When your time is done, sign the handover honestly and pass it on — a little larger, a little truer than you found it.
