A Guidebook Document by GDG on Campus JIS University · ESTD:- 2026

About this Playbook

This document is the operating manual of **GDG on Campus JIS University** — the standard every lead is expected to follow. It sets out how the chapter is run: how the core team is formed and what each role owns; how the community is expected to conduct itself; the integrity, privacy and terms the chapter holds to; how an event is cleared, run and documented on campus; how events are managed on GitHub; and how participation certificates are issued.

Leadership turns over every year, and with it the people, the energy and the ideas. What must *not* turn over is the standard — the way things are done here, the promises the chapter makes to its members and partners, and the record it keeps of its own work. This playbook is that constant. It is the chapter's shared, written agreement with itself, so that a new lead never has to guess the process or re-learn it the hard way, and so the chapter's way of working survives every handover intact.

It is deliberately practical. Where there is a process — an approval chain, a document to keep, a standard to meet — it is written here exactly, not left to memory or to a private chat. Treat it as binding for the routine, and as a floor, never a ceiling, for everything else you choose to build on top of it.

How to use it.

Read it in full before your first event, and return to it whenever a question of process or conduct comes up. When this playbook speaks to a situation, it is the answer; when it does not, decide in its spirit — honestly, in the community's interest — and then write down what you decided, so the next lead inherits an answer rather than the same open question.

→ Keep it alive.

A playbook that is never updated becomes folklore. When you learn something the hard way, write it down here so the next lead does not. Amend it honestly, in your own voice, and sign the handover so the chain of responsibility is never broken.

Acknowledgement & Declaration

Signed at the handover of leadership, from the outgoing Organiser to the incoming one. This page is renewed and re-signed every year.

Leadership Handover

Season 20____ – 20____

Declaration

I have read and understood the guidelines set out in this playbook – the standards of integrity, the Code of Conduct, the privacy and terms of the community, the lines of authority, and the processes for forming a team and for running and documenting events. As the incoming Organiser of **GDG on Campus JIS University**, I accept responsibility for upholding them, for the conduct of the core team I form, and for the honest record of the work done during my tenure.

I accept the chapter as it is handed to me, and I undertake to hand it forward – a little larger, a little truer than I found it – to whoever carries it next.

Forming the Core Team

The core team is the engine of the chapter. Its size and composition decide the year more than any single event does. Form it deliberately.

Who forms it.

Every core member must be a **student of JIS University**, from any department. Keep the team small — a **maximum of 6–9 core members** is recommended — and choose people who will **work mutually rather than compete**. A team that understands one another does more than a larger one that does not.

Principles

- **Every member has a defined role and a deliverable.** No seats without a mandate.
- **Keep it lean.** A tight team of 6–9 where everyone is accountable beats a large one where responsibility is diffuse.
- **Work mutually, not against each other.** Roles support one another; the goal is the chapter's success, not internal competition.
- **Ownership, not titles.** A role is a set of responsibilities someone answers for, not a badge.
- **Review participation through the year.** Roles that go unworked should be reassigned, not carried.

Standing roles — fixed every season; fill these first.

Standing role	Mandate
Mentor Manager	Owns technical direction and quality. Guides members, reviews what the chapter ships, and keeps the bar high across every domain the chapter runs.
Outreach	Builds the chapter's reach — connecting with other GDG chapters and communities, and creating the memes and attractive promotion that draw people in to join and work with the chapter.
Content	Writes the captions and posts across the chapter's social channels — the day-to-day public voice of the chapter.
Design	Owns the visual identity — posters, banners, certificates, decks and social creatives — held consistent with the Google / GDG brand.

The Outreach sheet.

The Outreach team keeps a running sheet — the outreach associate's name, the communities they have reached out to, and the current rate of success — so the chapter can see what is working and who is driving it.

Flexible roles — sized to the year.

Beyond the standing roles, keep the remaining seats flexible and open them according to what the year actually needs — more mentors for a hackathon-heavy calendar, more outreach for a partnership push, and so on. Add roles when there is work to justify them, and only then.

Integrity, Terms, Privacy & Conduct

These four standards are binding on the lead and every member. They are written plainly so there is no ambiguity about what the chapter expects.

01 Integrity

The chapter runs on trust – of its members, the Department, Google and its partners. We keep that trust by holding to the following, without exception.

- **Report figures as recorded.** Attendance, footfall and outcomes are reported as they actually happened. We never inflate numbers or overstate results.
- **Handle resources transparently.** Any funds, sponsorship, swag or credits are accounted for and spent on the community – never for private benefit.
- **Act in the chapter's interest.** The lead and the team hold their positions in trust for the community; the role, its access and its partners are never used for personal gain.
- **Declare conflicts of interest.** Where a personal, financial or outside interest could colour a decision, it is disclosed and the person steps back from that decision.
- **Recruit and assign fairly.** Roles, opportunities and recognition are given on merit and commitment – not on favouritism, and openly.
- **Honour commitments.** What is promised to speakers, partners, co-hosts and members is delivered; if it cannot be, it is communicated early and honestly.
- **Give credit.** Speakers, partners, volunteers and prior leads are acknowledged for their work; we do not take credit for what others did.
- **Represent affiliation truthfully.** We use the Google / GDG name and marks only as permitted under Google's community and brand guidelines, and never imply an endorsement, partnership or authority the chapter does not have.
- **Protect the chapter's name.** Every dealing – online and in person – is conducted so as to leave the chapter's standing stronger, not spent.

02 Terms of Service – Membership

These terms govern membership and the running of the chapter.

- **Who may join.** The chapter is open to anyone interested. There is no barrier to joining beyond wanting to take part and agreeing to the Code of Conduct.
- **Lines of authority.** The highest authority of the chapter is the **Faculty Advisor**, followed by the **chapter lead** (Organiser). Decisions and escalations follow that order.

- **Whose events these are.** Events are organised **by the chapter, not by the Department**. An event the chapter runs on its own is owned solely by the chapter. An event run in partnership with another organisation is **not owned by GDG JIS University** — it is a **co-hosted session** (listed on the dashboard), and GDG JIS University is named its organiser only where it is the initiator.
- **Authority in the room.** For any event held at JIS University, the GDG JIS University core team holds the **highest authority in the room** to manage and put the session together — in coordination with the other hosts.
- **Operating home.** The chapter operates under the Department of Computer Science & Engineering, JIS University, and within Google's program terms for GDG on Campus.
- **Communication channels.** The main community group is kept **free of any promotion other than the club's own**. A separate, dedicated group is maintained for promotions and event cross-posts, so the main group stays clean.
- **Voluntary participation.** Membership and all participation are voluntary and carry no payment or guarantee of position.
- **Responsible conduct.** Members act and speak in the chapter's name only with the lead's authorisation, and uphold the Code of Conduct at all times.
- **Work & credit.** Work produced for the chapter may be used by the chapter for its events, reports and promotion, with the contributor credited.

03 Privacy Policy

How the chapter handles the personal information of its members and attendees.

- **What we collect.** Name, roll number, academic year, email, phone number, social or GitHub handles where relevant, event registration and attendance, and event photographs.
- **Why we collect it.** Registration, attendance records, issuing certificates, event reporting, and communication with members — nothing beyond running the community.
- **Consent.** By registering for an event or joining a channel, a member consents to their data being used for those stated purposes.
- **Where it is stored.** In the chapter's dedicated Google Drive folders, and in the events repository for event records, with access limited to the core team members who need it.
- **Who can access it.** Access and admin rights are held only by the lead and the specific members whose role requires them, and are handed over cleanly when leadership changes.
- **Sharing.** Shared with Google or an event partner only to the extent needed to run the event or issue certificates. Personal data is **never sold** or used for unrelated purposes.
- **Communication.** We contact members only through the channels and address they provide, and members may opt out of non-essential messages at any time.
- **Photographs.** Photos taken at events may appear in reports and on chapter channels; anyone may ask for their image to be withheld or removed.

- **Retention & removal.** Records are kept for the chapter's institutional memory. A member may request correction or removal of their personal data by writing to the lead.

04

Code of Conduct

Everyone in the community – members, core team, volunteers, speakers and attendees – is expected to follow this, at every event, online and offline, and in all chapter channels. **Expected.**

- Be respectful, inclusive and welcoming, regardless of background, gender, or level of experience.
- Collaborate in good faith; give and take feedback professionally.
- Respect the venue, the Department, speakers, partners and fellow members.
- Keep community channels on-topic and civil, and represent the chapter well wherever you carry its name.
- Follow the lead's direction on chapter matters, and honour the commitments you take on.

Not tolerated.

- Harassment, discrimination, or intimidation in any form.
- Sharing others' private information; plagiarism or passing off others' work as your own.
- Disruptive, dishonest or unsafe behaviour at events or online.
- Spamming or posting outside promotion in the main community group (see the Terms), or misusing the chapter's name.

Membership & removal. Core members and other members may be asked to step down, or be removed from the community, for violating this Code – at the lead's supervision, and in consultation with the Faculty Advisor where the matter is serious.

Community channels & admin rights. Admin rights of the main WhatsApp group are held by the **current lead, one or two trusted members**, and – as an option – **any of the former organisers**. Admin is handed over as leadership changes, and the main group is kept free of outside promotion.

Reporting & enforcement. Concerns should be reported to the lead or the Faculty Advisor and are handled confidentially. Breaches are met with a graduated response – a warning first, and removal from the team or community where warranted.

Running an Event – Approval Flow

This is the communication chain for clearing an event on campus. It applies to **on-site events**, whether they are GDG's own or run with a community partner.

📍 On-site event

1 Email the Faculty Advisor

Sent by the student. Seek approval to hold the event — share the plan, date, format and partner (if any).

Attachment: the MoU (softcopy).

↓ *on Faculty Advisor approval*

2 Email the Department Coordinator

cc: HOI (Registrar) · HOD

Sent by the student, forwarding the approved plan.

↓ *only if audio equipment is needed*

3 Request microphone / speaker access

Email **HOI** and **Dr. Devlina Pal**.

cc: Faculty Advisor.

📁 After the second phase – sign the MoU hardcopy.

Once the departmental email (step 2) is done, the **MoU hardcopy** must be signed by the **Faculty Advisor** and the **Departmental Coordinator** and kept for the record.

📁 **Preferred rooms.** Small events **1001** · Medium events **1009** · Large events **1109**.

📶 Online event.

For an online event, the approval chain is not needed — but the event must still be put on record. **Email the Faculty Advisor only**, with the plan and date, so the chapter keeps a documented trail of everything it runs.

Steps 1–2 are the student's responsibility. Keep every approval email — it is part of the event's record (see the next section).

Email Standards & Event Records

Email footer

Every official email sent on the chapter's behalf must carry a consistent footer, so the community is recognisable and reachable. The footer must include the **lead's name and role**, the **lead's phone number**, and the **GDG JIS University stamp / logo**.

Event records — Google Drive

The Drive is the chapter's **official archive** — one master Google Drive for the chapter, with a **subfolder per event**, named consistently. Where GitHub holds the live coordination of an event, the Drive holds its final, signed records. Both are kept: GitHub to run the work, Drive to preserve it.

For **every event, online or offline**, upload the following to that event's Drive subfolder. These three documents are mandatory and are what make the Technical Report possible.

- | | | |
|----------|-------------------------|--|
| 1 | MoU | The Memorandum of Understanding for the event / partnership. |
| 2 | Attendance sheet | The recorded attendance for the event. |
| 3 | Event report | A written report of the event <i>with images</i> . |

Keep the Drive tidy and current. The record you keep today is the institutional memory the next lead inherits — and the raw material of every future report.

Managing Events on GitHub

Event coordination lives in one repository — `dscjisu/events` — the single source of truth for the whole lifecycle. An event is an issue, its stage is a label, and an approved event publishes itself to a public listing; nothing about an event lives in someone's head or a private chat. Alongside it, **every event also gets its own repository** for the material it produces — slides, code and resources. Maintain `dscjisu/events` as the home of the issue templates and workflows that drive all this; treat the repository as the thing to keep current — the exact file names inside it may change over time.

The event lifecycle — each event moves through these labelled stages.

Stage (issue label)	Meaning
need-info	Draft opened from the template. Required fields are still missing; the owner completes them.
scheduled	Dated, with full details. Awaiting the on-campus approval flow (see <i>Approval Flow</i>).
approved	Cleared through the approval flow. The README listing updates automatically.
graphics-ready	Banner and thumbnail made by the Design team and posted on the issue with the GDG event link.
mou-ready	The MoU is drafted and committed in the event repository, ready to sign.
listed	Attendance form and dashboard link set; the event is enlisted on the GDG dashboard.
completed	Held, with a valid attendance CSV committed. Records go to Drive (see <i>Event Records</i>); the event repo is locked, archived and shared on socials.
cancelled	Called off at any stage — the issue is closed with a reason and removed from the listing.

Each event has its own repository

Beyond the coordination hub, every event gets a dedicated repository holding the material it produces — the slides / PPT, any code or demos, and the resources meant to be shared. The drafted MoU, the attendance CSV and the event graphics live here too, so an event's whole footprint sits in one place.

📁 When it's done, lock it and share it.

Once an event repository is locked and set — nothing more to add — it is **archived** (made read-only) and **shared on the chapter's social profile**, so the work stays public and credited even after it goes quiet.

The event issue — what it captures — a proposed schema; the lead finalises the fields.

Field	Captured value
Title & type	Event name and kind — workshop, study group, hackathon, tech talk, meetup.
Mode	On-site or online.
Date & timings	Scheduled date and start / end time.
Room / venue	Room number for on-site; platform for online.
Description	A short abstract of the event.
Expected count	Anticipated number of participants.
Speakers	Required. One or more, comma-separated.
Hosts	Required. The GDG JIS University host(s) running the session.
Mentors / facilitators	<i>Optional.</i> Anyone supporting on the floor.
Partners	Community or industry collaborators, if any.
MoU needed?	Whether a Memorandum of Understanding is required.
Attendance form	The fixed Google Form circulated for attendance.
Dashboard link	The GDG dashboard listing or external event URL.
Owner	The core member responsible for the event.

What GitHub manages for us

- **Issues** — one per event, the single canonical record of everything about it.
- **Issue forms** — a structured intake matching the schema, so no detail is missed at the start.
- **Labels** — the lifecycle stage of each event, readable at a glance.
- **Project board** — a kanban of every event across the stages; the one view the whole core team works from.
- **Milestones** — events grouped by season or month, for planning the calendar.
- **Assignee** — the core member who owns each event and answers for it.
- **Actions** — regenerate the README on approval, and automate label transitions and housekeeping.
- **Committed artifacts** — the MoU, the event graphics, the attendance CSV and the event record, all version-controlled.
- **README** — the public, always-current listing the dashboard reads from.

✔ Definition of Done

Before an event is set out and moved to **listed**, every one of these must hold.

- ✔ Approved through the on-campus flow
- ✔ MoU committed, and the hardcopy signed
- ✔ Graphics linked – banner and thumbnail
- ✔ Attendance form ready
- ✔ Dashboard link set

Attendance & Certificates

A single **fixed Google Form** is circulated for **every event, of any type**, to take attendance. Whoever fills it is on record – and the participation certificate is generated from the **name and email** they give. We keep one schema for this form, with room for a flexible entry when an event needs a special input.

Form field	Notes
Full name	Required.
Email	Required – the address the certificate is sent to.
College	The college / institution the attendee is from.
Academic year	Year of study.
Event-specific field	Optional and flexible – added when a particular event needs a special input.

⚙ Every event issues a certificate.

Every event – **workshop, study group, hackathon or tech talk** – issues a participation certificate, generated from the **name and email** recorded in the form.

✔ Completion gate.

An event can be marked **completed** only when its repository holds a **valid attendance CSV**:

- The fixed columns – **Name, Email, College, Year** – are present; extra columns are allowed.
- The lead exports the form's responses (the Excel sheet) to CSV and commits it.
- The schema is fixed so the columns can be validated automatically, leaving room for alterations.

Event Graphics — the Standard

Event graphics are owned by the **Design team**, who make each event's poster in whatever style suits it — held consistent with the GDG brand. The *style* is free; the *deliverables and their sizes* are fixed, so every asset drops cleanly into the issue, the dashboard and socials.

Asset	Size	Use
Banner	2560 × 650 px	Event header on the dashboard and repository.
Thumbnail	1:1 (square)	Social card and event listing.

The banner and thumbnail are the *minimum*. An event can carry more than these — speaker cards, agenda slides, story assets, certificates — whatever it needs; add them as the event calls for it.

One home for the brand assets.

All of the chapter's brand assets — logos, banners, templates, fonts and colours — live in [dscjisu/branding](#). Use it as the single source for every graphic across the full tenure, and **keep it updated as needed**, so the whole team designs from the same, current kit.

When the graphics are ready

- Post the **thumbnail** and the **banner** as a comment on the event issue.
- Add the **GDG event link** in the same comment.
- Move the event to **graphics-ready**.

Cross-post every offline event.

For any brand-asset outreach, the chapter's presence must be cross-posted via **LD Instagram** and **Antiviral.social** for **all offline events** — so every on-ground event has a public footprint across the community's channels.

Freedom in the look, discipline in the format. Keeping the two sizes fixed means a poster made for one event fits every surface it needs to — no re-cropping, no surprises on the dashboard.

The MoU – Standard Format

Every event that involves a co-host or partner carries a **Memorandum of Understanding**. Its format is fixed – the same sections every time – so nothing is negotiated from a blank page and nothing important is left out.

Section	Contents
Parties	GDG on Campus JIS University and the co-host / partner, each named in full.
Event	Title, date, and venue or mode.
Purpose	What the collaboration is for, in a line or two.
Responsibilities	What each party will do – venue, speakers, promotion, logistics.
Contributions	Resources each side brings – space, tooling, swag, funds (if any).
Branding & credit	How each party is named and credited, and the terms of brand use.
Data & privacy	How attendee data is handled – per the chapter’s Privacy Policy.
Term	The dates over which the MoU is valid.
Points of contact	One named contact for each party.
Signatures	Chapter lead, Faculty Advisor, and the partner’s representative.

The MoU sanctions the event.

Follow the MoU as the record that **sanctions every event held in the venue**. It is not paperwork for its own sake – it is what authorises the event to run. Keep it on record for each one.

Working with a partner.

A campus or collaborative partner must **sign the MoU** and **accept the sharing of brand assets** for the PR and the poster design, so that GDG JIS University’s presence is shown. In turn, collaborating with GDG JIS University supports the partner – helping with taking sessions, introductory pre-event meets, and registrations wherever feasible.

Refreshing the Organisation Repositories

The `dscjisu` GitHub organisation carries several years of history — old event repos, one-off experiments, tutorials and the current season's work, all side by side. Keeping it tidy is part of the lead's stewardship: a newcomer landing on the org should see at a glance what is active, what each repository is for, and where the current work lives. A cluttered org quietly tells everyone the chapter is not looked after; a clean one tells them the opposite. The refresh is done in phases.

- 1 Archive the old** Repositories that are no longer active are **archived** — made read-only. Nothing is ever deleted; the history and the credit are preserved, but retired work is clearly set apart from the live surface so it stops competing for attention.
- 2 Describe the rest** Every kept repository is given a **clear one-line description and topics**, and a short README where it is missing, so anyone browsing the org understands what each one is and whether it is current — without having to open it.
- 3 Split for maintenance** The consolidated event material is **divided into its respective per-event repositories**, each owned and maintained on its own. This is the endpoint of the GitHub-based event workflow — one clean repository per event, described, and archived once it goes quiet.

Automated housekeeping.

A scheduled workflow in the org's `.github` repository orchestrates the whole organisation. On a timer, it inventories every repository, reports what looks stale, and **archives those with no maintenance for a set period** — leaving a short **exceptions list** (the profile repos, the events hub, and anything explicitly pinned as active) untouched. Housekeeping runs on a schedule, not on someone remembering to do it — so the org stays clean between leads, not just right after a manual clean-up.

>_ And scriptable by hand.

For a one-off pass, the same actions run through the `gh` CLI — `gh repo archive`, `gh repo edit --description`, `gh repo edit --add-topic` — so a lead with organisation-admin access can bring the whole org up to date in a single sweep whenever needed, and re-run it each season.

A Note to the Next Lead

You inherit a chapter, a community, and this playbook. Follow it where it is settled, improve it where it is not, and never let the standards slip below the floor it sets. When your time is done, sign the handover honestly and pass it on — a little larger, a little truer than you found it.

The community comes first — before any event, any number, any credit, and before your own convenience. Everything else in this playbook is downstream of that one idea. To lead is to take up the work, not to be seen doing it: to carry the load when it is heavy, to be patient when things are slow, and to be steady enough not to lose your cool when they go wrong. Your first duty is to the people — to protect the members, make room for them, and make sure no one is used or left behind.

A good lead sees trouble before it arrives. Learn to read the points of failure — the unowned task, the overloaded volunteer, the unclear agreement, the quiet resentment — and defuse them early. Avoid conflict where you can; where it cannot be avoided, face it directly, fairly, and in the open, and take the right action even when it is the harder one. The chapter's calm is your responsibility, and it is built one steady decision at a time.

None of this is done alone, and none of it has to be perfect. You will make mistakes; own them, fix them, and write down what you learned so the next lead does not repeat them. What the chapter asks of you is not brilliance but care — that you show up, keep your word, and leave it better than you found it. Do that, and you will have done the job well.

Be patient. Be fair. Protect your people. Keep your word, keep your calm, and keep the community first. Do that, and everything this playbook asks of you will follow naturally.

*"A community is only as strong as the memory it keeps
and the people willing to carry it forward."*

♥ **All the very best, next lead. The chapter is yours now.**
